

WHY FILTERED VS BOTTLED WATER?

*Roughly 75% of water bottles in the United States are not recycled, producing 22 billion plastic bottles which are added to landfills every year.

*Plastic bottles will not even begin to decompose for hundreds of years.

*According to the Earth Policy Institute, "the United States uses more than one million barrels of oil annually to produce water bottles sold in the U.S."

SAVINGS

*It costs 5-10 times as much to drink bottled water instead of filtered tap water.

ENVIRONMENTAL IMPACT

*30 million water bottles are consumed daily in the US. Only 25% of those are recycled, which contributes to nearly 4 billion pounds of waste annually.

HEALTH

Just as tap water quality varies from city to city, bottled water quality varies from one product to the next, depending on the type and quality of the source water and the treatment it undergoes at the bottling facility.

*Based on the average family water consumption of 300 gallons of water/year
